RE: Opportunities for Students and New Graduates

Dear Professor:

Esri continually seeks bright, top-level **students majoring in computer science, geography, and geographic information systems (GIS)** for a number of positions throughout our organization as well as for our summer programs. Please share this information with those you feel would be interested in joining Esri.

- We have **entry-level opportunities** for students who are ready to apply their education to a challenging career with a world-leading company—one that allows them to grow personally and professionally. Positions include software development programmers, software product engineers, Web developers, geospatial analysts, and support analysts.
- Our **Summer Internship Program** offers valuable work experience for students still in school or those preparing for life after graduation. As interns, they have the opportunity to work in a variety of departments, gaining experience with talented GIS and business professionals.
- The **Student Assistantship Program** provides sponsorships to a number of students who wish to work at the Esri International User Conference in San Diego, California, July 11–15, 2011. Students are able to attend sessions in exchange for assisting with monitoring sessions, registration, staffing, and overall logistics.

We value the importance of collaborating with universities to acquire top talent. Please encourage your students to visit esri.com/grads to learn more about our career opportunities and summer programs. Feel free to contact me at michael_johnson@esri.com if you would like additional information or to discuss other ways we can engage your students.

Sincerely,

Michael Johnson
University Recruiting

P.S. You and your students can stay connected with us year-round. Complete details are at www.esri.com/grads.
