

ANALYST DEVELOPER INTERMEDIATE

The Application Developer Intermediate is a professional, staff position within Application Engineering. The fundamental responsibility is development, implementation, and/or maintenance (i.e., support & repair) of application-based solutions.

Knowledgeable of enterprise level development practices, policies and standards as well as information technology service management processes.

Responsibilities and deliverables span all phases of the software development lifecycle (SDLC) including:

- Requirements Analysis
- Design
- Development
- Testing
- Deployment
- Maintenance (i.e., support & repairs)

In addition to application source code, work product deliverables include requirements documentation, time estimates, design specifications, test plans, and any other documentation associated with projects, tasks, applications, support tickets, etc. to which they are assigned. Prepares activity and status reports regarding the activities to which they are assigned.

Possesses sufficient knowledge and expertise to work independently within the design, development, testing, deployment, and maintenance phases of the SDLC on projects of any size and/or complexity. With general supervision, is competent within the requirements analysis phase of the SDLC on small projects and/or maintenance activities.

Duties require significant interaction with internal University customers, moderate interaction with external vendors, independent judgment, and limited decision making.

Consults and collaborates extensively and positively with personnel in other technical departments to coordinate activities. Is able to effectively facilitate small meetings.

With general supervision, is competent to serve in role of project manager on small projects.

Possesses extensive knowledge and demonstrated proficiency with regard to relevant application technology within the applicable domain area within Application Engineering.

This position receives general direction from management and operates at a moderate level of independence.

The Application Developer Intermediate is accountable for overall success of projects and/or activities to which they are assigned.

Salary: Commensurate with experience

Minimum Qualifications: Bachelor's degree and 2 years of related experience; or a combination of education and experience.
