

What is it?

Startup Exchange is a **10 week start up engineering program** that will help you to learn how to get started with your entrepreneurial idea.

This program is an invaluable resource to startups as it introduces student entrepreneurs to customer discovery, business model canvas, and pitches and helps them to build a network of resources to turn ideas into a business. This program will consist of open discussions and collaboration, complemented with optional homework and readings. We will have two meetings per week: one focused on the theoretical approach to startups and one focused on hands on activities and workshops.

You will get to work with the newest technologies out like the **Google Glass, Oculus Rift, Xbox's Kinect, and much more.**
