

SunTrust Banks, Inc.

is looking for talented individuals to be part of an innovative time for our company and make a valuable contribution to our success and yours!

Summer Internship Opportunity - Enterprise Information Services (EIS)

Overview

SunTrust Bank is seeking creative, talented, clever, and passionate people for a summer internship in our technology and operations group. Enterprise Information Services (EIS) develops and supports the systems and tools that enable our 26,000 teammates to serve the financial needs of over 4 million clients.

The EIS Summer Internship Program provides current college students with an opportunity to sharpen their leadership, technical, engineering and business skills through a 10-week working and learning experience. Interns will divide their time between two groups this summer. Each intern will work primarily with an EIS functional group, such as Application Development, Transaction Operations, or Production Support and will have the chance to develop and sharpen concrete skills in a traditional IT or Operational team. Each intern will be also work on summer-long projects that are sponsored by the SunTrust Innovation Program. In this component of the internship, students will work in teams with both full-time teammates and other interns to develop prototypes of new services, products, and experiences for SunTrust. On these teams, interns will be challenged to go from ideas to working prototypes in just a few weeks.

Interns are given a wide range of opportunities in many different specialties. Past Interns have worked on projects involving business process improvements, internal tool enhancements, application development, reporting efficiency, project management, data analysis, social media and more.

We want young professionals with leadership qualities and the drive, passion and desire to constantly learn and grow.

Majors

The EIS Internship Program is looking for driven, capable students. It's likely that you are majoring in one of the following areas:
