

Dr. PETER MOLNAR

Robinson College of business  
Georgia State University

Dr. Péter Molnár is a consultant for Machine Learning and Artificial Intelligence with AWS Professional Services, and Adjunct Professor and Senior Research Scientist at the J. Mack Robinson College of Business at Georgia State University. He is a data science and design leader whose passion is creating value from data analytics, modeling and simulations. A multidisciplinary academic and business professional, Dr. Molnár is advancing and applying data science theories and tools in both public and private domains.

## Create a question and Answer Chat Bot with Amazon Lex and Amazon Alexa

Amazon Web Services (AWS) offers a number of Artificial intelligence (AI) services like image and video analysis, natural language, personalized recommendations, virtual assistants, and forecasting, that can be integrated into applications without deep expertise in machine learning. Each of the services can be used standalone, or in concert to create sophisticated human-like functionality. In this workshop, we show you how to deploy a question-and-answer bot using two open-source projects: QnABot and Lex-Web-UI. We demonstrate how to get started quickly using Amazon Lex, Amazon Alexa, and Amazon Elasticsearch Service (Amazon ES) to provide a conversational chatbot interface.

### RSVP FOR EVENT

### DATE & VENUE

Feb 18, 12:00 AM to 1:00 PM  
25 Park Place, Room #223

## Free Pizza and Drinks

Win Exciting Door Prize..!!
