

BRENT ZUCKER

Software Engineering Manager, NCR
Innovation Lab

Brent is the Software Engineering Manager at NCR's Innovation Lab. Previously, Brent was an NCR Innovation Lab engineer and technical lead for almost 4 years, focusing on applications of machine learning and computer vision. Brent received his Masters from Georgia Tech in 2019 where he studied Computer Science, AI, and ML. Prior to his Masters and work at NCR, Brent interned at several startups and corporations as well as completing his undergraduate degree in Computer Science from Georgia College in 2016.

The Future of Retail: AI, Computer Vision, Bio metrics, and Block chain

NCR's Innovation Lab focuses on leveraging emerging technology and new business models to empower banks, retailers, and restaurants to compete in a digital world. The Innovation Lab not only attempts to demonstrate the "art of the possible" but also strives to develop new products and disrupt existing solutions. Today we will discuss our key innovation areas and capabilities as well as share a few of the projects we recently demonstrated at NRF, the world's largest retail conference and expo, this past January in New York. Please attend if you are interested in blockchain, biometrics, AI, computer vision, and data privacy

RSVP FOR EVENT

DATE & VENUE
